A genuinely useful comparative analysis. What you own in each case, how the assets appreciate differently, what the maintenance obligations are, what the resale market looks like, and how to think about which product suits which investor profile. Not a sales document for plotted development — an honest comparison that acknowledges when a flat is the right choice.

FAQs

Q: Is plotted development a better investment than a flat?

A: It depends on the location, your holding period, and your intentions for the land. In high-growth infrastructure corridors, plotted land has historically outperformed vertical residential. In established urban markets with strong rental demand, a flat may offer better short-term returns.

Q: What do I own when I buy a plot?

A: The land itself — with the right to build within local municipal guidelines.

Q: Can I build whatever I want on a plot?

A: Within the FSI (Floor Space Index) and building regulations of the local planning authority. Your developer should provide the applicable guidelines for your specific plot.
